

Andrew Sundaradhas

Chennai, India

andrew.sundaradhas2023@vitstudent.ac.in | github.com/andrewsundaradhas | linkedin.com/in/andrew-sundaradhas

OBJECTIVE

Computer Science & Robotics student with ML expertise seeking Software Engineer roles in AI/ML and robotics.

EDUCATION

B.Tech Computer Science & Robotics, VIT Chennai

Expected 2027

Relevant: ML, AI, Data Structures, Algorithms, Robotics, Database Systems.

SKILLS

Languages	C++, R, Python
ML/AI Frameworks	TensorFlow, PyTorch, scikit-learn
Databases	Neo4j, SQLite, MySQL, MongoDB, Postgres, Redis
Technologies	Firebase, Datadog, Apache Kafka, Docker
Robotics	ROS, Drone Technology, Autonomous Systems

EXPERIENCE

Vice Chairperson & Programming Lead — Atom Robotics Club

2024 – Present

VIT Chennai

- Led autonomous drone systems using ROS/TensorFlow (95% obstacle detection).
- Implemented computer vision for real-time tracking (40% faster processing).
- Trained ML models for drone flight control in complex environments.
- Mentored 15+ team members in ML applications for robotics.

Technical Lead — Yuva VIT Chennai

2025 – Present

VIT Chennai

- Architected Neo4j graph database (60% query performance improvement).
- Implemented Redis caching (45% API response reduction).
- Led React/TypeScript UI framework development.
- Designed ML pipelines processing 1M+ records (99.9% accuracy).

PROJECTS

PayScope — Fintech Analytics Platform. AI-powered financial intelligence system that transforms raw payment data into actionable insights. Implemented machine learning algorithms for transaction pattern analysis, anomaly detection, and predictive KPI forecasting. Features deterministic AI routes using neural networks for automated report generation, real-time data visualization with Recharts, and conversational analytics. Built with Next.js 16, TypeScript, and advanced ML pipelines for Visa/Mastercard data processing.

NLP for Emails & Case Notes. Advanced natural language processing system leveraging BERT transformers for intelligent document analysis. Developed custom ML models for semantic email categorization, intent recognition with 92% accuracy, and automated summarization of complex case histories. Implemented transfer learning techniques to reduce manual processing time by 70% while maintaining context awareness across operational workflows.

Crop Health Prediction System. Comprehensive machine learning solution for agricultural disease detection using computer vision. Trained EfficientNetBo model on 50,000+ plant images achieving 95%

accuracy in disease classification. Developed end-to-end ML pipeline with FastAPI backend, React frontend, and MongoDB for data persistence. Implemented real-time inference processing and scalable architecture handling 1000+ concurrent requests with automated model retraining capabilities.

LEADERSHIP

Director	Vertex Innovate
• Speaking skills through stakeholder meetings & tech conferences. • Negotiations expertise (30% cost savings via vendor management). • Cross-functional team leadership (15+ members across departments). • HR management: team building, performance reviews, conflict resolution. • Technical recruiting: hired 25+ engineers (95% retention). • AI/ML hackathon organizer (100+ students mentored).
